Program Title : Java program on instance variable

```
class Assignment1
{        //Instance variable
         int a=10;
         int b=20;

         static void method1()
         {        //Printing instance variable by using object
                  Assignment1 as =new Assignment1();
                  System.out.println(as.a);
                  System.out.println(as.b);
         }
         static void method2()
         {        //Printing instance variable by using object
                  Assignment1 as =new Assignment1();
                  System.out.println(as.a);
                  System.out.println(as.b);
         }
         public static void main(String[] args)
         {        //Static method calling
                  Assignment1.method1();
                  Assignment1.method2();
         }
}
```

Output:
10
20
10
20
