Program Title: Java program on constructor calling class

```java
Assignment3
{
        Assignment3()                     // Default Constructor
        {
                this(10);                     // Constructor Calling
                System.out.println("0 argument constructor");
        }
        Assignment3(int a)                //Parameterized Constructor
        {
                this(200,100);                // Constructor Calling
                System.out.println("1 argument constructor");
        }
        Assignment3(int b,int c)          //Parameterized Constructor
        {
                System.out.println("2 argument constructor");
        }
        public static void main(String []args)
        {
                Assignment3 as= new Assignment3();
        }

}
```

Output:

2 argument constructor

1 argument constructor

0 argument constructor
